AIRCRAFT VIDEO/VGA DISPLAYS

DDAU-0567

AIRCRAFT ANCILLARY INSTALLATION EQUIPMENT DATA DISTRIBUTION AMPLIFIER

The Data Distribution Amplifier (DDAU-0567-01) provides dual RS232 GPS data feeds from a single input RS232 feed.

The unit may be used for example to provide dual buffered outputs to say a data Transmitter unit and to a system Interface unit from a single source data feed.

The unit is housed in a die-cast metal box with slotted flanges allowing mounting of the unit to any flat surface using four countersunk fixings.

- Die-cast aluminium enclosure with lap joint construction offering RF shielding and IP54 ingress protection
- Vبرا smooth matt black surface finish
- Flanged base allows wall or shelf mounting

The unit features one Line receiver and two line drivers to RS-232 and V.28 communications in harsh environments.

The Receiver input and each transmitter output is protected against +/- 15kV electrostatic discharge (ESD) shocks without latchup. The device conforms to EIA/TIA-232E and CCITT V.28 specifications at data rates up to 120kbps, when loaded in accordance with EIA/TIA-232E specification.

The video Input connection to the unit is via a single 9 pin "D" shell connector which carries the input and power signals. The mating connector is retained by two jacking posts.
